

PRODUCT BROCHURE

*All Steam Pro is a Canadian owned and operated company
specialized in providing steam and condensate solutions*

PRODUCTS

We are a Canadian owned and operated company specializing in selling, installing and servicing steam equipment.

1 Steam Boilers

We carry different types of steam boilers including Fire Tube, Water tube and Coil Tube. Also Low Volume Boilers that are operator exempt in Ontario.

2 Feed Tank

Our feed water tank packages are fabricated in Stainless Steel and Carbon Steel and come with steam injectors, automatic level controls, sight glass, feed pumps and stands.

3 Blowdown Tank

We supply steam boiler blowdown tanks and separators fabricated to ASME standards with CRN for all Canadian provinces. Our packages come with automatic cooling valve, strainer and temperature dial.

4 De-Aerator Tanks

Our De-Aerator Tanks are designed to remove oxygen from steam boiler feed water to reduce the amount of chemicals used for treatment. Our De-Aerator tanks come with steam control valve, automatic level controls, safety valve, sight glass and control panels with PLC and HMI options.

5 Water Softeners

We offer complete water treatment systems for steam boilers that include water softeners, polishers, carbon filters, RO packages, chemical dosing systems, water testing kits and boiler chemicals.

6 Pressure Reducing Valve

Our cutting edge pressure reducing valve stations are fabricated complete with inlet and outlet valves, control valve with smart positioner, strainer, safety valve, control panel and drip traps. We will design and size each station to your load requirement.

7 Steam Traps

We offer a wide range of steam traps like Float and Thermostatic, Thermodynamic and Bucket traps. In addition to this we supply all types of check valves, strainers, safety valves, pressure gauges and others.

8 Control Valves Refurbishment

We offer refurbishment services for control valves, pilot steam regulators and safety valves. Refurbishing valves can save on capital cost and provide better lead time.

SERVICES

> STEAM TRAPS SURVEY

Annual steam traps surveys are necessary to check the functionality of all traps in a steam system and provide detailed reports identifying which traps are operating satisfactory and which are failed. Replacing failed traps is one of the easiest maintenance work to do to save on gas.

> 24/7 BOILER SERVICE

We offer annual steam boiler inspection along with 24/7 emergency service calls to service steam boilers in Ontario. Our techs have many years of experience and can work on different types of boiler such as Miura, Thermogenics, Fulton, Clayton, Hurst and Unilux. We also carry parts for major boiler manufacturers.

> STEAM AUDITS

We conduct full plant steam and condensate audits where we calculate steam loads and trace all steam and condensate loops and provide CAD PID drawings. Our audits are extensive and identify all areas of improvement.

> CRN REGISTRATION

Our team can get CRN registration for your unregistered equipment. Whether it is imported or used equipment we can get it registered and certified. We also conduct all required pressure testing that is part of the registration process.

> MECHANICAL INSTALLATION

We provide turn key mechanical installation that includes full steam and condensate piping installation in addition to complete steam boilers installation. Our team has many years of experience installing different types of steam boilers which saves time for our customers when executing projects. We strive to make steam boiler installation the easiest part in our customer's project.
